This microbe was discovered in Okinawa, JAPAN

1

(1) चकत्तल मिस की मीठी पट्टी चकत्तली से डालें

Put few inch thick layer of charcoal mix at the bottom of the bucket.

2

(2) हर बार रसोई का कूड़ा डालें, और चकत्तल मिस से ढकें।

Each time kitchen waste is added, cover the waste with the charcoal-mix.

3

(3) पत्ती का ढक्कन बंद कर दें ताकि चकत्तल सूखे नहीं

Close the lid of the charcoal bucket so that the charcoal does not dry out.

4

(4) रसोई का कूड़ा और चकत्तल मिस डालें रहें। और तब बनाते रहें।

Continue adding kitchen waste and charcoal mix. Make layers of waste and charcoal.

5

(5) जब पत्तीला भर जाती, ढक्कन लगा दें और 2 हफ्ते से 1 महीने का इंतजार करें। इस समय पत्तीले में सूखी उठना शुरू हो जाएगा जिसे आप मसिखे हो अथवा मिटाऊआ की च की मल के डिब्बे से रखा कुछ खाता है।

When the bucket become full, COVER and wait for 1 month. During this period, the material start fermentation. Microbe start to become active. They like to live in the air chamber of charcoal.

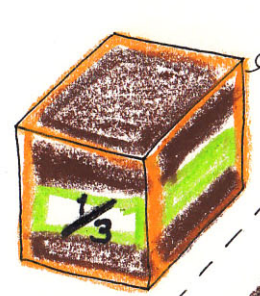

6

(6) एक नया पत्तीला तैयार कीजिए यदि आप लगातार जारी रखना चाहें हैं तो।

set up a new collecting bucket, if you like to continue.

7

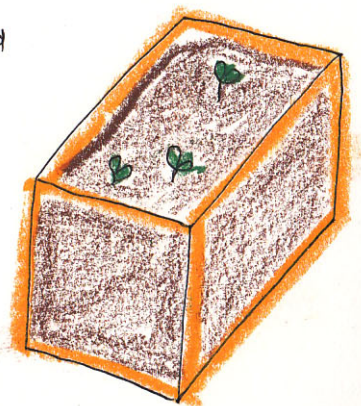

box could be prastic container which will be used for gardening later

(7) रसोई का समय or simply make it मिट्टी मिलाइये अनुपात होगा: कूड़ा: मिट्टी 1:3

After the fermentation period, mix with soil. The ratio is waste : soil = 1 : 3

8

(8) 2-3 महीने का इंतजार कीजिए।

Wait for 2 to 3 months. → complete the compost!
